Introduction

Working on this project taught us so much about ERP systems and why they're so important for businesses. What really clicked for us was seeing how these systems bring all the different departments together. Instead of everyone working in silos, teams can actually share information easily and stay on the same page. We got particularly interested in Odoo.

It's become super popular, and for good reason-it's open source, flexible, and honestly pretty easy to use once you get the hang of it. What I like is that it has all these different modules for Sales, Inventory, Accounting, HR, and they're all connected.

Everything works together in one system, which just makes sense for running a business day-to-day. I chose the Sales Module for my project. Basically, sales are the heartbeat of any business, right? This module does everything, from creating quotes to confirming orders, sending out invoices, and keeping track of payments. Automation of these sales activities and its integration with Inventory and Accounting mean less manual work, fewer mistakes, and happier customers in the end.

Software Overview

Odoo is basically an open-source ERP platform that contains a whole bunch of business applications. All the companies can manage everything from inside one system, and their departments stay connected. It's built with Python and uses PostgreSQL for the database – pretty solid tech stack. What's cool is that you can choose to run it in the cloud or host it yourself, depending on what your company needs. But probably the best part for me is the modular setup: you don't have to implement everything at once. Just start with the basics like Sales, Inventory, or CRM and then add to it as you grow.

The customization is totally impressive, and since everything talks to each other, all your data remains consistent between departments. Pretty simple interface, too, so you're not spending an age trying to find out how to do basic things. And it's open-source; there's this whole community that keeps enhancing it and writing add-ons. It really does work for different types of businesses.

Key Features of the Sales Module

Customer Management You get a full view of your customers: their contact information, past orders, communication history, all in a single space. You also can group them into categories to serve them better.

Quotations & Orders The creation of professional quotes is easy; converting these into actual sales orders takes just a few clicks.

Invoices are generated automatically from those orders.

Inventory Management: The section connects directly to your inventory in real-time. If someone places an order, the amount in stock will be updated automatically. You can even set it up to reorder products automatically based on sales.

Invoicing & Payments: Invoices come directly from your sales orders. You can process payments online, track what's been paid, and see which invoices are still outstanding.

Reporting & Analytics: The reporting tools give you real visibility into how sales perform, what customers buy, and order statuses-all the data you need to spot trends and make informed decisions.

Purpose of Each Feature

The customer management piece helps you to personalize your service because you've got everybody's history right there when you need it. With quotes and orders, you're simplifying the whole sales process: quote to order to invoice, the works. Inventory management prevents overselling and running out of stock unexpectedly. Those real-time updates make a big difference. The invoicing features make getting paid quicker, which is very important to every business, and facilitate easy follow-up on unpaid invoices. And the reporting gives the managers actual data to work with instead of just guessing. You can see what's working and what needs attention.

Sales Application Odoo's Sales application is utilized by companies to handle both cash and credit sales. The workflow is pretty logical: create a quote, then turn the quote into a sales order, create an invoice, track the payment.

□

You place a due date on the invoice for credit sales, and follow up on them through the accounting module. Cash sales are paid right at the time when the transaction takes place.

The Difference Between Sales and Point-of-Sale So, here's what I found confusing at first: Sales and Point-of-Sale are really different things in Odoo. The Sales application is more for business-to-business stuff, contracts, formal orders. Think of it as the administrative side of sales. Point-of-Sale is meant for immediate, direct sales, like those that occur in a retail store or restaurant: A cashier rings things up quickly at the register, and that's a done deal. It's built for speed and simplicity in face-to-face transactions.

Sales application

The Sales module in the Odoo system is used to manage sales operations within companies, whether they are cash sales or credit sales.

The system allows the creation of price quotations, converting them into sales orders, then issuing invoices and tracking payment status. In the case of credit sales, the invoice is recorded with a specified due date and followed up later through the accounting module. For cash sales, payment is made immediately upon completing the transaction.

The difference between Sales and Point-of-Sale

The Sales module differs from the Point-of-Sales module. Sales are often used for administrative sales or contracts conducted through quotes and official orders, whereas Point of Sale is intended for immediate sales in retail stores and restaurants, where the transaction is carried out directly and quickly from the cashier's interface.

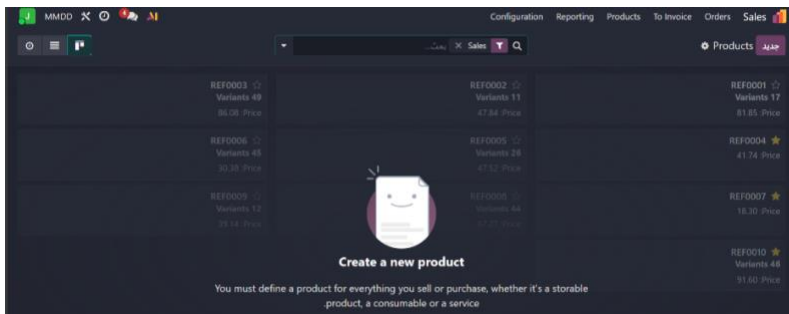

Screen components in the Sales:

- Products
- Orders
- To Invoice
- Configuration
- Reporting

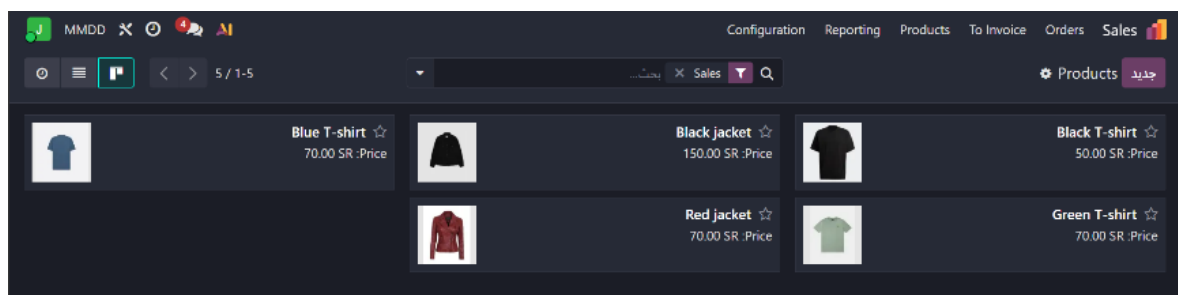

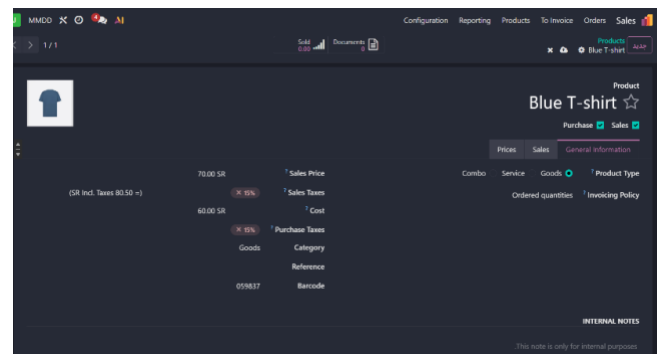

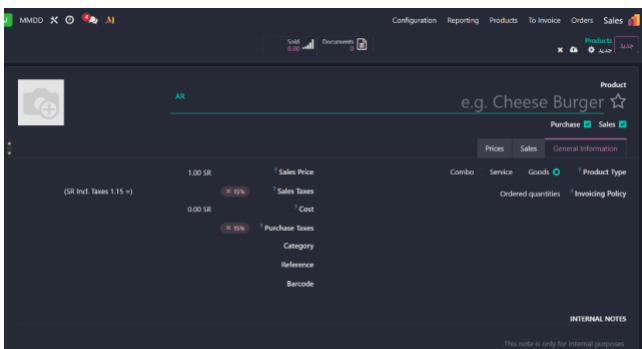

Products

At the beginning, if no product exists, a new product is created in the system.

Creating new product

- 1- Click on the New button at the top of the page.
- 2- Enter the product details:
 - Product name
 - Product Type
 - Product image
 - Sales Price
 - Sales Taxes
 - Cost
 - Purchase Taxes
 - Category
- 3- Click Save to add the product.

Orders

An order is considered a core element in sales applications and the most important component because it executes the sales process. It includes:

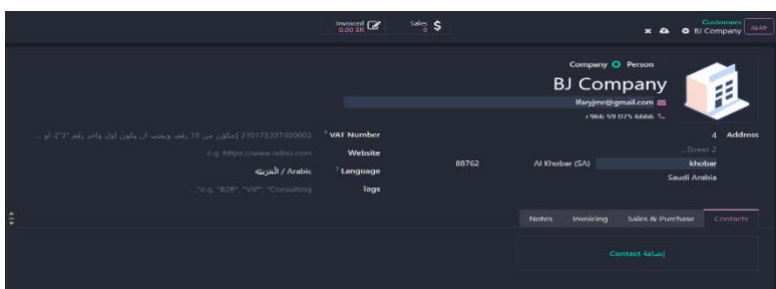

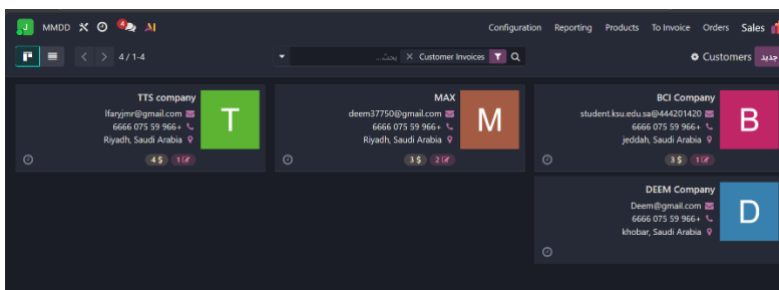

- Customer
- sales team
- Orders
- Quotations

Customer

When a customer does not exist in the system, they can be added directly from the customer field.

- 1- Click New at the top of the page.
- 2- Enter the customer details, including:
 - Type: Individual or Company
 - Name
 - Email
 - Language, Website
 - Country
 - State
 - City
 - Street Address
 - Invoice: Choose whether invoices will be sent manually or automatically
 - Payment Methods: Select the available payment options such as cash, bank transfer, or credit card
- 3- Click Save to add the customer.

There are many other fields available, but these are the most important ones.

Sales Teams

- 1- Access to the system is based on the permissions granted to those who have been added to the system.
- 2- Select the Region.
- 3- Choose the Team Manager and the Salesperson.
- 4- For each member working in the team, enter the following details related to the sales team:
 - Type: Person or Company
 - Name
 - Email
 - Position
 - Country
 - State
 - City
 - Payment Methods
 - Invoice: choose whether it will be manual, automatic
- 5- Click Save to add the sales team.

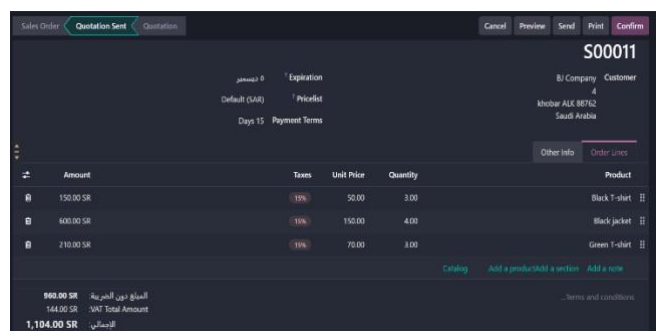

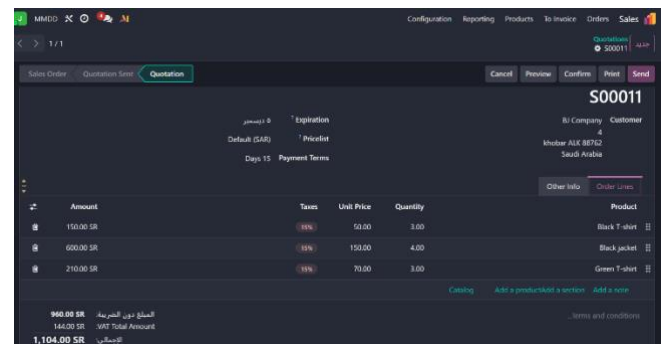

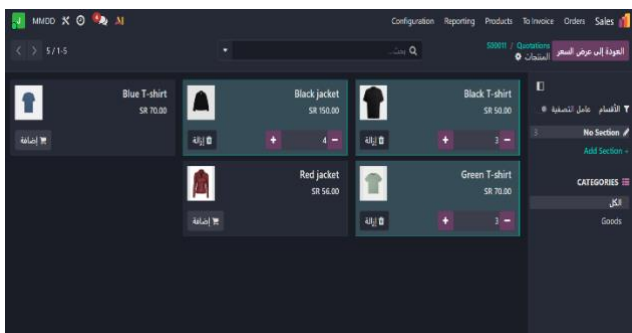

The screenshot shows a form for adding a sales team member. The user is 'jumanh Al-ghamdi' with email 'janymer@gmail.com' and phone '+966 59 075 6666'. The form is divided into sections for 'Sales Manager' and 'Job Position'. The 'Sales Manager' section includes fields for 'VAT Number' (110175397400003), 'Website' (https://www.odoo.com), 'Language' (العربية / Arabic), and 'Tags' (e.g., 'B2B', 'VIP', 'Consulting'). The 'Job Position' section includes fields for 'ZIP', 'State', and 'City'. The 'City' field is set to 'Saudi Arabia'. The form also has tabs for 'Notes', 'Invoicing', 'Sales & Purchase', and 'Contacts'.

The screenshot shows the 'Sales Teams' selection screen. It features a search bar at the top with the text 'جستجو' (Search) and a magnifying glass icon. Below the search bar, there are two main sections: 'Jeddah' and 'Riyadh'. Each section has a list of team members, represented by small icons (a yellow 'D' for Jeddah and a green 'J' for Riyadh).

Quotations

Order Creation Stage

- 1- Click New at the top of the page.
- 2- Enter the customer details, including:
 - Name of customer
 - Expiration
 - Pricelist
 - Payment Terms
 - In catalog add product
 - Quantity of products
 - Salesperson
 - Payment method
 - Delivery Date
- 3- Send quotation.

Quotations

In the Quotations dashboard, all sales orders are listed along with their total amount, order status, and related invoice information.

Sales Order

In the sales order, the statuses To Invoice and Fully Invoiced appear to indicate the billing progress of each order.

To Invoice means the order has not yet been invoiced, while Fully Invoiced indicates that the invoice has been completely issued.

A screenshot of an email client interface. At the top right, the word 'رسائل' (Messages) is visible. Below it, the email header shows 'by Post' and 'by Email' with a checkmark. The sender is 'BJ Company' (highlighted in a red box) and the recipient is 'To'. The subject is 'MMDD Invoice (Ref INV/2025/00004)'. The email body contains the text: 'Dear BJ Company', 'Here is your invoice INV/2025/00004 (with reference: S00011) amounting in 1,104.00 SR from MMDD. Please remit payment at your earliest convenience', 'Please use the following communication for your payment: INV/2025/00004', 'Do not hesitate to contact us if you have any questions', and 'deem37750@gmail.com'. At the bottom right, there is a red 'X' icon and a link to 'INV_2025_00004.pdf'. The bottom of the interface shows a toolbar with icons for attachments, a 'Discard' button, and a 'Send' button.
